Date: 2023-09-13

Aim:

Write a java program to demonstrate operator precedence and associativity

Source Code:

```
import java.util.Scanner;
class OperatorPrecedence{
    public static void main(String args[])
    {
        int x,result;
        System.out.print("Enter a num: ");
        Scanner sc=new Scanner(System.in);
        x=sc.nextInt();
        result=x++ + x++ * --x / x++ - --x + 3 >> 1 | 2;
        System.out.println("The operation going is x++ + x++ * --x / x++ - --x + 3

>> 1 | 2");
        System.out.println("result = "+result);
    }
}
```

Execution Results - All test cases have succeeded!

```
Test Case - 1

User Output

Enter a num:

4

The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 | 2

result = 3
```

```
Test Case - 2

User Output

Enter a num:

-3

The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 | 2

result = 2
```

Date: 2023-09-13

Aim:

write a java program that uses if-else control statement and print the result

Source Code:

```
import java.util.Scanner;
class Control{
    public static void main(String args[])
    {
        int x,y,z;
        Scanner sc=new Scanner(System.in);
        System.out.print("Enter first num : ");
        x=sc.nextInt();
        System.out.print("Enter second num : ");
        y=sc.nextInt();
        z=x+y;
        if(z < 20)
        System.out.println("x + y is less than 20");
        else
        System.out.println("x + y is greater than 20");
    }
}</pre>
```

Execution Results - All test cases have succeeded!

```
Test Case - 1

User Output

Enter first num :

13

Enter second num :

5

x + y is less than 20
```

```
Test Case - 2

User Output

Enter first num:

24

Enter second num:

10

x + y is greater than 20
```

Write Java program on use of Inheritance.

Create a classVehicle

• contains the data members **color** of String type and **speed** and **size** of integer data type.

Exp. Name: A program to illustrate Inheritance

• write a methodsetVehicleAttributes() to initialize the data members

Create another classCarwhich is derived from the classVehicle

- contains the data membersccandgearsofintegerdata type
- write a methodsetCarAttributes() to initialize the data members
- write a method display Car Attributes () which will display all the attributes.

Write another class InheritanceDemo with main() it receives five arguments color, speed, size, cc and gears.

Source Code:

}

}

```
InheritanceDemo.java
// Type Content here...import java.util.*;
class vehicle {
       int speed;
        int size;
        String color:
        void SetVehicleAttributes(String c,String sp,String s){
                color=c:
                speed= Integer.parseInt(sp);
                size= Integer.parseInt(s);
class Car extends vehicle {
        int cc ;
        int gears;
        void setCarAttributes(String c,String sp,String s,String cce,String gear){
                SetVehicleAttributes(c,sp,s);
                cc= Integer.parseInt(cce);
                gears=Integer.parseInt(gear);
                displayCarAttributes();
        }
        void displayCarAttributes(){
                System.out.println("Color of Car : "+color);
                System.out.println("Speed of Car : "+speed);
                System.out.println("Size of Car : "+size);
                System.out.println("CC of Car : "+cc);
                System.out.println("No of gears of Car : "+gears);
        }
public class InheritanceDemo {
        public static void main(String args[]){
                Car b1=new Car();
                b1.setCarAttributes(args[0],args[1],args[2],args[3],args[4]);
```

	Test Case - 1
User Output	
Color of Car : Blue	
Speed of Car : 100	
Size of Car : 20	
CC of Car : 1000	
No of gears of Car : 5	

Test Case - 2
User Output
Color of Car : Orange
Speed of Car : 120
Size of Car : 25
CC of Car : 900
No of gears of Car : 5

ID: 224G1A0589 Page No: 15

2022-2026-CSE-B Srinivasa Ramanujan Institute of Technology

write a java program to prevent inheritance using abstract class.

- Create an abstract class Shape
- Create a class Rectangle which extends the class Shape
- Class Rectangle contains a method draw which prints drawing rectangle
- Create another class circle1 which extends Shape
- Class circle1 contains a method **draw** whih prints **drawing circle**
- Create a main class TestAbstraction1

s.draw();

• Create object for the class circle1 and called the method draw

Source Code:

```
TestAbstraction1.java
abstract class Shape{
        abstract void draw();
class Rectangle extends Shape {
        void draw(){
                System.out.println("drawing Rectangle");
}
class Circle1 extends Shape {
        void draw() {
                System.out.println("drawing circle");
}
class TestAbstraction1{
        public static void main(String args[]){
               Shape s=new Circle1();
```

Execution Results - All test cases have succeeded!

User Output

drawing circle

}

}

Test Case - 1

write a program on dynamic binding

Source Code:

```
Demo.java
class Human{
        public void walk() {
                System.out.println("Human walks");
class Demo extends Human {
        public void walk () {
                System.out.println("Boy walks");
        public static void main(String args[]) {
                Human obj = new Demo();
                Human obj2=new Human();
                obj.walk();
                obj2.walk();
        }
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Boy walks
Human walks

```

Execution Results - All test cases have succeeded!

Test Case - 1

User Output

Bike is running safely

Srinivasa Ramanujan Institute of Technology 2022-2026-CSE-B

ID: 224G1A0589 Page No: 18

Write a Java program that implements an interface.

```
Create an interface called <code>Car</code> with two abstract methods <code>String getName()</code> and <code>int getMaxSpeed()</code>. Also declare one <code>default</code> method <code>void applyBreak()</code> which has the code snippet

System.out.println("Applying break on " + getName());
```

In the same interface include a **static** method (Car getFastestCar(Car car1, Car car2)), which returns **car1** if the **maxSpeed** of **car1** is greater than or equal to that of **car2**, else should return **car2**.

Create a class called BMW which implements the interface Car and provides the implementation for the abstract methods **getName()** and **getMaxSpeed()** (make sure to declare the appropriate fields to store **name** and **maxSpeed** and also the constructor to initialize them).

Similarly, create a class called Audi which implements the interface Car and provides the implementation for the abstract methods **getName()** and **getMaxSpeed()** (make sure to declare the appropriate fields to store **name** and **maxSpeed** and also the constructor to initialize them).

Create a **public** class called MainApp with the **main()** method.

Take the input from the command line arguments. Create objects for the classes (BMW) and (Audi) then print the fastest car.

Note:

Java 8 introduced a new feature called default methods or defender methods, which allow developers to add new methods to the interfaces without breaking the existing implementation of these interface. These default methods can also be overridden in the implementing classes or made abstract in the extending interfaces. If they are not overridden, their implementation will be shared by all the implementing classes or sub interfaces.

Below is the syntax for declaring a default method in an interface :

```
public default void methodName() {
    System.out.println("This is a default method in interface");
}
```

Similarly, **Java 8** also introduced <u>static</u> methods inside interfaces, which act as regular static methods in classes. These allow developers group the utility functions along with the interfaces instead of defining them in a separate helper class.

Below is the syntax for declaring a static method in an interface :

```
public static void methodName() {
    System.out.println("This is a static method in interface");
}
```

Note: Please don't change the package name.

Source Code:

q11284/MainApp.java

Write a java program to create a super class called Figure that receives the dimensions of two dimensional objects. It also defines a method called area that computes the area of an object. The program derives two subclasses from Figure. The first is Rectangle and second is Triangle. Each of the sub classes override area() so that it returns the area of a rectangle and triangle respectively

Source Code:

AbstractAreas.java

ID: 224G1A0589 Page No: 30

```
Srinivasa Ramanujan Institute of Technology 2022-2026-CSE-B
```

```
import java.util.*;
abstract class Figure{
        double dim1;
        double dim2;
        double dim3;
        double dim4;
        Figure(double a,double b){
                dim1=a;
                dim2=b;
                dim3=a;
                dim4=b;
        abstract void area();
class Rectangle extends Figure{
        Rectangle(double a,double b)
                super(a,b);
        void area(){
                double Area=dim1*dim2;
                System.out.println("Rectangle:");
                System.out.println("Area is "+Area);
class Triangle extends Figure{
        Triangle(double a,double b)
                super(a,b);
        }
        void area(){
                double Area=(dim3*dim4)/2;
                System.out.println("Triangle:");
                System.out.println("Area is "+Area);
}
class AbstractAreas{
        public static void main(String args[]){
                System.out.println("Enter lenght and breadth of Rectangle :");
                Scanner input = new Scanner(System.in);
                double dim1=input.nextDouble();
                double dim2=input.nextDouble();
                System.out.println("Enter height and side of Triangle :");

Exp. Name: Write a Java program demonstrating S.No: 25 Date: 2024-01-02 the usage of Threads

Aim:

Write a Java program that uses three threads to perform the below actions:

- 1. First thread should print "Good morning" for every 1 second for 2 times
- 2. Second thread should print "Hello" for every 1 seconds for 2 times
- 3. Third thread should print "Welcome" for every 3 seconds for 1 times

Write appropriate constructor in the Printer class which implements (Runnable) interface to take three arguments: message, delay and count of types String, int and int respectively.

Write code in the Printer, run() method to print the message with appropriate delay and for number of times mentioned in count.

Write a class called ThreadDemo with the main() method which instantiates and executes three instances of the above mentioned Printer class as threads to produce the desired output.

[Note: If you want to sleep for **2** seconds you should call Thread.sleep(2000); as the Thread.sleep(...) method takes milliseconds as argument.]

Note: Please don't change the package name.

Source Code:

q11349/ThreadDemo.java
